

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the instant application:

**What is claimed is:**

1. (Currently Amended) A method of arranging grammar files in a presentation list in a callflow development graphical user interface (GUI), comprising the steps of:

receiving a request to visually display in the GUI the grammar files in the presentation list;

distinguishing between a first subset of files that contain user-defined grammars, each defining a user-defined grammar file, and a second subset of files that contain built-in grammars, each defining a built-in grammar file, wherein each user-defined grammar file was written by a user of a call-flow application and each built-in grammar file was available when the call-flow application was installed;

sorting the grammar files based on a first criterion that always assigns the first subset of files priority over the second subset of files; and

sorting the grammar files within the first subset of files and the grammar files within the second subset of files according to a second criterion;

simultaneously displaying the first subset of files and the second subset of files within the presentation list such that the user-defined grammar files in the first subset of files are presented ahead of the built-in grammar files in the second subset of files; and

partitioning the first subset of files and the second subset of files by a visual aid.

2. (Original) The method of claim 1, wherein the method further comprises the step of displaying the grammar files when a user selects the grammar files.

3. (Previously Presented) The method of claim 1, wherein the step of visually displaying comprises presenting the presentation list such that each grammar file is labeled with a

label indicating whether the grammar file is a user-defined grammar file or a built-in grammar file.

4. (Previously Presented) The method of claim 1, wherein the step of visually displaying comprises presenting the presentation list such that each grammar file is presented in a text format that indicates whether the grammar file is a user-defined grammar file or a built-in grammar file.

5. (Previously Presented) The method of claim 1, wherein the user-defined grammar files and the built-in grammar files can share the same name.

6. (Previously Presented) The method of claim 1, wherein the second criterion is an alphabetical order.

7. (Previously Presented) The method of claim 1, wherein the second criterion is a chronological order.

8-21. (Cancelled)
